

Modern Clipboard

Quick Start Guide — Version 1.0.0

Get up and running in under 5 minutes.

Step 1 — Install

1. Copy **Modern Clipboard.app** to your `/Applications` folder.
2. Double-click to launch. A clipboard icon appears in your menu bar.

Note: Modern Clipboard launches automatically at login by default. To turn this off, go to **Preferences** → **General** and disable **Launch Modern Clipboard at login**.

Step 2 — Grant Accessibility Permission

Modern Clipboard needs Accessibility permission to paste on your behalf.

When prompted, click **Open System Settings** → find **Modern Clipboard** → toggle it **on**.

Missed the prompt? Open the menu bar icon → **Preferences** → **General** → click **Open System Settings**.

Step 3 — Copy Something

Copy any text as you normally would (⌘C, i.e. Command-C). Modern Clipboard captures it automatically — no action needed.

Step 4 — Paste from History

Press **⇧⌘V** (Shift-Command-V) from anywhere to open the history popup.

Key	What it does
↓ / ↑	Move between items
↵ (Return)	Paste the selected item
1 – 9	Instantly paste item 1–9
Esc (Escape)	Close without pasting

The popup closes and pastes into whatever app you were using.

Tip: Copied formatting (bold, links, colors) is preserved on paste if **Preserve formatting when pasting** is enabled in Preferences. Want it to match the destination's existing style instead? Hold **⌥ Option**

(configurable) while pasting from the popup — this pastes plain text that takes on the formatting already in place where you're pasting.

Step 5 — Create a Snippet

Snippets are text blocks you save once and reuse forever — great for signatures, templates, or common replies.

1. Press **⇧⌘S** (Shift-Command-S) to open the snippets popup.
2. Click **Edit Snippets...** below the folder list to open the snippet editor.
3. Click **+** in the left column to create a folder.
4. Select your folder, then click **+** in the middle column to add a snippet.
5. Enter a title and your text, then click **Save**.

Press **⇧⌘S** (Shift-Command-S) anywhere to open your snippets and paste one.

That's it!

Action	Shortcut	
Open clipboard history	⇧⌘V	Shift-Command-V
Open snippets	⇧⌘S	Shift-Command-S
Open Preferences	⌘,	Command-Comma

Ran into a problem or have an idea? Open **Preferences** → **Help** to report a bug, request a feature, or export diagnostics.
